Marginata

Scientific Name: *Dracaena marginata*

Water: Water when soil is dry to the touch. Do Not over water.

Light: Indirect or bright-diffused light is best.

Temperature: 60-85°

Humidity: Medium to High

Insects: Spider Mite

Marginata is very easy to grow and will tolerate most homes. On the Central Coast they can be grown in a patio area owing to our wonderful climate. Marginatas only require protection from frost.
