## Split-Leaved Philodendron

**Scientific Name:**

*Monstera deliciosa*

*mon-STEER-ah dee-lish-ee-OH-sah*

**Water:**

Moderately moist soil is preferred. Water when just the soil surface is dry to the touch.

**Light:**

Indirect or bright-diffused light is best.

**Temperature:**

Warm 70F-75F degrees during the daytime and 65F-70F degrees at night.

**Tips:**

The easy-to-grow split-leaved philodendron gets its common name from the decorative perforations in its large, deeply lobed leaves.

Generally grown pole supported plant.

Watch for scale and mealybugs.
